

Ngo Front End

Form Name = X

First Step :

1.created database table using Form Name.

Ex:

```
*/  
public function up()  
{  
    Schema::create('fd_five_forms', function (Blueprint $table) {  
        $table->id();  
        $table->bigInteger('fdId')->unsigned();  
  
$table->foreign('fdId')->references('id')->on('fd_one_forms')->onDelete('c  
ascade');  
  
        $table->string('file_one')->nullable();  
        $table->string('status',100)->nullable();  
        $table->timestamps();  
    });  
}
```

2.Create Controller:

Ex:

```
class FdFiveFormController extends Controller
```

3.create Route:

Ex:

```
Route::resource('fdFiveForm',FdFiveFormController::class);  
  
Route::controller(FdFiveFormController::class)->group(function () {  
  
    Route::get('fdFiveFormPdf/{id}',  
'fdFiveFormPdf')->name('fdFiveFormPdf');  
});
```

4. Create **(Create, Update, Delete, View & download)** function.

(Function can be increased as per requirement)

NGO Back End Form Name = X

Second Step:

1. Create four table related to 'X' Form:

Ex:

```
public function up(): void
{
    Schema::create('fd_five_daks', function (Blueprint
$table) {
        $table->id();
        $table->string('sender_admin_id')->nullable();
        $table->string('receiver_admin_id')->nullable();
        $table->string('fd_five_status_id')->nullable();
        $table->string('original_recipient')->nullable();
        $table->string('copy_of_work')->nullable();

        $table->string('informational_purposes')->nullable();

        $table->string('attraction_attention')->nullable();
        $table->string('dak_detail_id')->nullable();
        $table->string('status',100)->nullable();
        $table->string('nothi_jat_id',100)->nullable();

        $table->string('nothi_jat_status',100)->nullable();
        $table->string('sent_status',100)->nullable();
        $table->string('present_status',100)->nullable();
        $table->string('amPmValue',200)->nullable();
        $table->timestamps();
    });
}
```

```

public function up(): void
{
    Schema::create('parent_note_for_fd_fives', function
(Blueprint $table) {
        $table->id();
        $table->bigInteger('nothi_detail_id')->unsigned();
        $table->string('serial_number');
        $table->string('subject');
        $table->string('name');
        $table->timestamps();
    });
}

```

```

public function up(): void
{
    Schema::create('child_note_for_fd_fives', function
(Blueprint $table) {
        $table->id();
        $table->bigInteger('pnote_fd_five')->unsigned();

$table->foreign('pnote_fd_five')->references('id')->on('parent
_note_for_fd_fives')->onDelete('cascade');
        $table->string('serial_number');
        $table->longText('description');
        $table->string('admin_id',11);
        $table->string('receiver_id',11)->nullable();
        $table->string('sent_status',11)->nullable();
        $table->string('sender_id',11)->nullable();
        $table->string('view_status',11)->nullable();
        $table->string('back_sign_status',11)->nullable();
        $table->string('amPmValue',200)->nullable();
        $table->string('amPmValueUpdate',200)->nullable();
        $table->timestamps();
    });
}

```

```

public function up(): void
{
    Schema::create('fd_five_office_saroks', function
(Blueprint $table) {
        $table->id();
        $table->bigInteger('pnote_fd_five')->unsigned();

        $table->foreign('pnote_fd_five')->references('id')->on('parent
_note_for_fd_fives')->onDelete('cascade');
        $table->text('office_subject')->nullable();
        $table->text('office_sutro')->nullable();
        $table->longText('description')->nullable();
        $table->text('extra_text')->nullable();
        $table->text('sarok_number')->nullable();
        $table->timestamps();
    });
}

```

2. Create controller related to form

Ex:

```

class Fd5Controller extends Controller

```

3. Create Route relate to form

```

Route::resource('fd5Form', Fd5Controller::class);

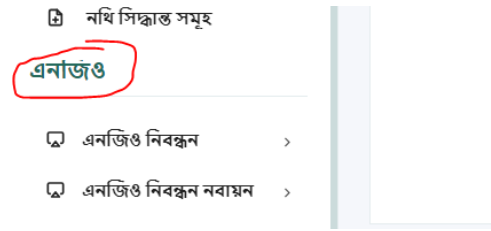

Route::controller(Fd5Controller::class)->group(function () {

    Route::post('/fd5FormStatus','fd5FormStatus')->name('fd5FormStatus');
    Route::get('/fd5FormPdf/{id}','fd5FormPdf')->name('fd5FormPdf');

});

```

Work Under Ngo

1.Create Button In SideBar :

File Location : resources->views->admin->include->sidebar.php

Ex:

```
<li class="dropdown">
    <a class="nav-link menu-title link-nav {{ Route::is('fd5Form.index')
|| Route::is('fd5Form.show') ? 'active' : '' }}" href="{{
route('fd5Form.index') }}">
        <i data-feather="airplay"></i>
        <span>এফডি - ৫ </span>
    </a>
</li>
```

2.Complete work in 'X' Form controller :

Ex:

```
public function index(Request $request){
}

public function show($id){
}

public function fd5FormPdf($id){

}

public function fd5FormStatus(Request $request){

}
```

Work Process In Dak

1.Update Function In PostController:

Ex:

```
public function showDataAll($status,$id){  
  
}  
public function dakListFirstStep(Request $request){  
  
}  
public function dakListSecondStep(Request $request){  
  
}  
public function all_dak_list(){  
  
}  
public function index(){  
  
}  
public function sent_dak(){  
  
}
```

Work Process In Nothi

1.Update Function in ParentNote:

Ex:

```
public function addParentNote($status,$dakId,$nothiId){  
  
}  
  
public function addParentNoteFromView($status,$dakId,$nothiId){  
  
}  
public function storeDataFromSenderView(Request $request){  
  
}  
public function store(Request $request){  
  
}
```

2.update function in childNoteController

Ex:

```
public function getdataforNothiList(Request $request) {
}

public function deleteAllParagraph($id,$status) {
}

public function printPotrangsoPdfForEmail($status,$parentId,$nothiId,$id) {
}

public function printPotrangso($status,$parentId,$nothiId,$id,$sarokCode) {
}

public function
addChildNoteFromView($status,$parentId,$nothiId,$id,$activeCode) {
}

public function printAllParagraph($status,$parentId,$nothiId,$id) {
}

public function printAllParagraphFromSend($status,$parentId,$nothiId,$id) {
}

    public function
printParagraphViewSingle($status,$parentId,$nothiId,$id,$childIdNew) {
}

public function
printParagraphAddSingle($status,$parentId,$nothiId,$id,$childIdNew) {
}

public function addChildNote($status,$parentId,$nothiId,$id,$activeCode) {
}

public function viewChildNote($status,$parentId,$nothiId,$id,$activeCode) {
}

    public function
givePermissionForPetroZari($status,$parentId,$nothiId,$id,$childnote) {
}

    public function saveNothiPermission($data) {
}

public function saveNothiPermissionReturn($data) {
}

public function store(Request $request) {
}

public function update(Request $request,$id) {
}
}
```

2.update function in NothiJatController:

```
public function returnToAgotoDak($id, $status){  
  
    }  
  
public function updateNothiJat(Request $request){  
}
```

3.update Function OfficeSarokController

```
public function store(Request $request){  
}
```

4.update Function in Dashboard Controller

```
public function index(){  
}
```

5.update App Service Provider:

```
public function boot(): void  
{  
}
```

Search Function In NothiJat and PresentNothi

1.route

Ex:

```
Route::controller(NothiJatController::class)->group(function () {  
  
Route::get('/searchResultNothiJatFdFive',  
'searchResultNothiJatFdFive')->name('searchResultNothiJatFdFive');  
  
});
```

2.add js code in script.blade.php

File Location : resources->views->admin->post->script.blade.php

```
<script>
    $("[id^=nothiSearchfdFive]").keyup(function() {

        var main_id = $(this).attr('id');
        var result = main_id.slice(17);
        var main_value = $(this).val();

        var status = 'fdFive'

        //alert(result);

        $.ajax({
            url: "{{ route('searchResultForDak') }}",
            method: 'GET',
            data: {main_value:main_value,result:result,status:status},
            success: function(data) {

                $("#nothiSearchResultfdFive"+result).html(data);
            }
        });
    });
</script>
```

```
});
```

```
</script>
```

```
<script>
    $('[id^=nothiJatSearchfdFive]').keyup(function() {
var main_id = $(this).attr('id');
var result = main_id.slice(20);
var main_value = $(this).val();

$.ajax({
url: "{{ route('searchResultNothiJatFdFive') }}",
method: 'GET',
data: {main_value:main_value,result:result},
success: function(data) {

    $("#nothijatSearchResultfdFive"+result).html(data);
}
});

});

$("[id^=nothijatfdFiveFinal]").click(function() {

var dakId = $(this).data('dakid');
var nothiId = $(this).data('nothiid');
var status = $(this).data('dakstatus');

$.ajax({
    url: "{{ route('updateNothiJat') }}",
    method: 'GET',
    data: {dakId:dakId,nothiId:nothiId,status:status},
    success: function(data) {
```

```
        location.reload(true);
    alertify.set('notifier','position','top-center');
    alertify.success('সফলভাবে কপি হয়েছে');
    }
    });

});

</script>
```
